TOWNSHIP 36 SOUTH, RANGE 22 EAST, SALT LAKE MERIDIAN, UTAH.

The survey was executed in accordance with the specifications as set forth in the Manual of Instructions for the Survey of the Public Lands of the United States, 2009, and the Special Instructions for Group No. 1097, dated September 28, 2009.

The direction of the lines was determined by references to true meridians, established by Global Positioning System (GPS) utilizing Real-Time Kinematic (RTK) techniques throughout the survey. The positional accuracy of this survey complies with the *Standards and Guidelines for Cadastral Surveys Using Global Positioning System Methods, May 9, 2001, Version 1.0*. Trimble model 5800 GPS receivers were used for field collection. Cadastral Automated Plat Drafting (CAPD) software was the primary software utilized for project calculations.

Preliminary to the resurvey, the lines of the prior surveys were retraced and a search was made for all corners and other calls of record. Identified corners were remonumented in their original positions. Lost corners were reestablished and remonumented at proportionate positions based on the official record. The retracement data were thoroughly verified and only the true line field notes are given herein.

Cadastral Control Network was derived from GPS static observations, post processed by National Geodetic Survey, Online Positioning User Service (OPUS), utilizing Continuously Operating Reference Stations (CORS): DI3419 P012 MONTICELLOUT2006 CORS ARP, DH6916 MC04 MESA CNTY 04 COOP CORS ARP, DL3522 MC06 MACK CORS ARP, and DL3642 MC09 NUCLA CORS ARP.

The geographic position for the standard corner of sections 31 and 36, T. 35 S., Rs. 21 and 22 E., as determined by direct RTK methods from the National Geodetic Survey OPUS solution, is as follows:

Latitude: 37°41'04.843" N.,
 Longitude: 109°33'19.665" W., N.A.D. 83 (CORS96)
 Network Accuracy = 0.200 meter at 95% confidence

The geographic position of the corner of sections 19, 24, 25, and 30, on the west boundary of T. 36 S., R. 22 E., as determined by direct RTK methods from the National Geodetic Survey OPUS solution, is as follows:

Latitude: 37°38'07.928" N.,
 Longitude: 109°32'52.588" W., N.A.D. 83 (CORS96)
 Network Accuracy = 0.200 meter at 95% confidence

Reestablishment of the Survey Executed by
 D.B. Miller and J.C. Thoma in 1912.

Beginning at the Standard Corner of sections 33 and 34, T. 35 S., R. 22 E., monumented with an iron post, 3 inches diameter, firmly set, projecting 20 inches above the ground, with brass cap marked as described in the official record of the 1912 survey.

Rehabilitate mound of stone to 3 feet diameter base, to cap.

There is no remaining evidence of the 1912 bearing trees.

From the corner, a fenceline, 4-strand barbed wire, extends north and east.

N. 89°54.8' W., along the south boundary of section 33.

- 39.927 Point for the Standard 1/4 section corner of section 33 only, at proportionate distance, there is no remaining evidence of the original corner.

Set an aluminum post, 30 inches long, 2 1/2 inches diameter, 29 inches in the ground, with magnet at base, with aluminum cap marked:

T35S R22E

The two bearing trees were not used to establish the true corner point, because the record bearing and distance from each tree, as recorded in the original notes of the 1912 survey, provided no point of intersection at which the original corner might have been located. Throughout this resurvey, mounds of stones were commonly found surrounding the iron posts, even when not mentioned in the field notes. The bearing trees found throughout this resurvey have been sporadic in their bearings and distances in relationship to the found corners.
